

Future Matters

Best Practice Workshop :

Advanced Operations and Integration for ClearPath OS2200

Brussels, September 24th 2009

In 2009 we changed our Future Matters format with single day management ClearPath Briefings - held in UK, Belgium and France – our last 2009 event will be in Stockholm October 15th focused on OS2200 technologies. We also introduced Technology Updates with EAE / Agile Business Suite user events, and now Best Practice Workshops – for both the OS2200 and MCP environments.

Advanced Operations and Integration for ClearPath OS2200 – Best Practice Workshop.

Please join us at the Center for Innovation, Unisys Belgium on 24th September for a practical and informative workshop for OS2200 clients.

Who should attend, and why?

With a strong emphasis on practical advice these workshops are designed for technical operations or applications specialists. You'll hear and see how to make new ClearPath features work for you – based on demonstrations. See how you can integrate ClearPath applications and date with other services in either JAVA or .NET environments. We'll show you how you can automate the management of ClearPath systems, increasing the security and availability of your applications.

No death by PowerPoint! You'll see solutions in action and return to your business with ideas and information you can put to use immediately. So, we will maximize the use of demonstrations and discussions, and keep presentation material to a minimum. Take advantage of this free consultancy opportunity – ensure all your colleagues are aware of this open invitation.

Where and When?

The workshop will be held at the Center for Innovation in the Unisys office in Brussels, Belgium, starting at 10:00 and running through to 15:30. At the end of the workshop session you may leave, or join us for refreshments and individual discussions with consultants. We would like to discuss the ideas you have seen and how Unisys can help implement these solutions in your own organisation.

Workshop content

09:30 Arrivals/Coffee

10:00 **Workshop Commences:** (coffee/comfort breaks as required)

Introduction - Overview of latest Software Release Announcement and Dorado servers.

Single Point of Operations – a demonstration of the latest release of Operations Sentinel, with examples showing how it can be used for monitoring remote SRDF links, and managing tape capacities in a virtual tape environment.

Workload Management for Next Generation Servers - a demonstration of the workload management interfaces for the latest Dorado systems, how to configure and manage speciality engines for JAVA Processing, and an introduction to Dorado High Availability capabilities.

12:00 Lunch

13:00 **Workshop recommences:** (coffee/comfort breaks as required)

Modern Development Environment for OS2200. An overview of the middleware integrations for OS2200 with .NET and JAVA, followed by a demonstration of integration and modernization of OS2200 TIP and Cobol programs using Eclipse and Java Resource Adapters/Connectors. The will show how to access RDMS databases, and to debug Cobol programs within the Eclipse Integrated development environment.

Operations Automation – a demonstration by SMA of OpCon showing easy steps to automate activities and set up alerts in response to events. SMA will be accompanied by a client to discuss their experience.

Security – Enhancements in the latest software release and demonstration of Enhanced Security Profiles: how to configure and use security profiles to strengthen protection for ClearPath applications and data.

Virtual Tape Options – a summary of the various options available for virtual tape, and the benefits of each.

15:30 Refreshments, 1:1 discussions

16:30 Departures / Close
