

Real-Time Chargeback (RTC) Implementation Services

RTC Implementation Services

Definition

Unisys designed our RTC Implementation Services to promote a successful implementation of RTC in an enterprise environment. We can provide all levels of services to support the implementation and usage of RTC. Services, if required, cover the use of RTC to collect utilization data for billing at an application, server, or virtual server level. They also cover the use of RTC to profile applications that contain a requirement to run multiple applications on a single server to bill the owning department or group of an application for its use of a portion of a server.

Unisys RTC Implementation Services can include the following:

- Installation and configuration
- Transformation and importation of data
- Integration services
- Modeling of application resource profiles
- Assessments of the impact on an agency's business
- Development of dashboards
- Custom reporting services
- Custom training.
